

# Sustainably Managed Forests

***Sustainably managed forests*** are forests that are planned and chopped down to ensure that they never run out.

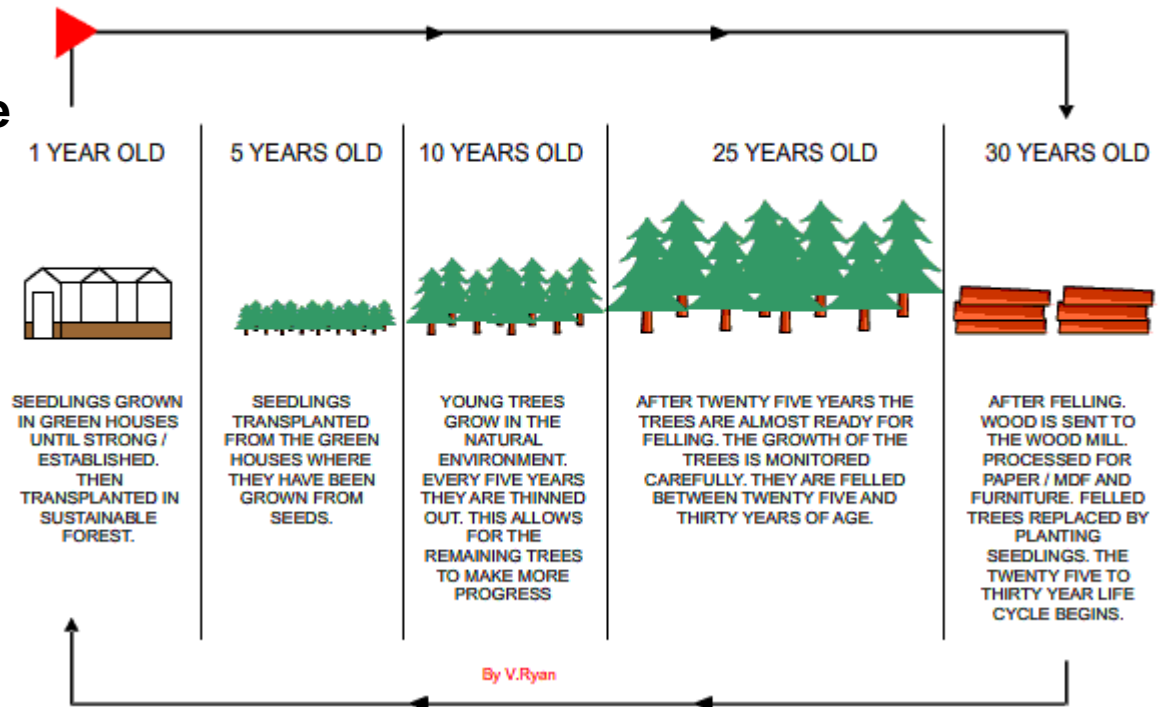

Seedlings are planed every year, to re-grow the same number of trees that were chopped down. Therefore they never run out.

This is only possible with fast growing Softwoods.

The [Forest Stewardship Council](#) (FSC) are an organisation that checks and provides a certification to prove that the paper or timber has been managed sustainably.

## SUSTAINABLE FOREST LIFE CYCLE

**Pine is an example of a sustainable softwood**
